

Oral PrEP Uptake in South Africa: A snapshot from mid-2017

LESSONS LEARNED

PrEP incorporated well into combination prevention delivered by NIMART trained nurses.

Since implementation, clients' views of PrEP have evolved; there are increased levels of cycling on and off PrEP due to risk profile changes.

Peer outreach, convenient operating hours and mobile services drive higher service uptake.

Strong adherence support is critical, especially in the first few months of PrEP use.

Note: HIV testing numbers reflect new tests, not routine testing for current PrEP users.
