

One Timeline, Two Stories, One Message: Putting trials and targets together

One problem with HIV prevention agendas is that they either live in an eternal present or in a far-off future. It's *Work with what we've got*, which is condoms and VMMC and a little bit of PrEP, or it's *Nothing can change without an AIDS vaccine*. The future depends on using what's available, better and more widely, without ever losing sight of what's in the pipeline. As the figures below show, in the very same timeframe that the world will miss its critical target for incidence reduction and scale-up of primary prevention, several trials will release results that could change the future. 2020 will be a time of hope and reckoning. But only if the two stories start to be told as one.

Trajectories to fast-track prevention targets: The present state of HIV prevention

Upcoming efficacy trial results: The future of HIV prevention
