

MPT Products in the Pipeline: Selected highlights

Products not requiring daily-use

90-day IVR (LNG and tenofovir)

An intravaginal ring (IVR) that stays in for 90 days and releases two hormones, levonorgestrel (LNG) for contraception and tenofovir for HIV and HSV-2 prevention.

(Developer: CONRAD)

90-day IVR (dapivirine and LNG)

An intravaginal ring (IVR) that stays in for 90 days and releases a combination of dapivirine to prevent HIV and levonorgestrel-releasing hormone (LNG) to prevent pregnancy.

(Developer: IPM)

Products used around the time of sex

mapp66 (mAB) Film

A combination of 3 monoclonal antibodies (mABs) delivered through a biodegradable film for protection against HIV and HSV-2.

(Developer: Mapp Biopharmaceutical, Inc.)

Vaginal insert (tenofovir and TFV/FTC)

Fast-dissolve vaginal tables with tenofovir alone and tenofovir combined with emtricitabine (TDF/FTC) for HIV and HSV-2 protection.

(Developer: CONRAD)
