

## Global ART Coverage (2014)

Here is the current view of global ART coverage. To close the gaps and have a high impact, it's key to have high-quality services, better, simpler regimens and a comprehensive, rights-based approach that puts informed choice and civil society leadership at the center. This approach isn't in place of or in addition to the scientific evidence. It is evidence-based, with extensive reports showing that ART succeeds with community-based models of delivery and support.
